PROJECTS

Airbnb Fullstack clone — *Nextjs, Prisma, MongoDB, Stripe*

In this application, users can effortlessly create and manage their own listings, while tourists can seamlessly browse and book these listings. The search functionality empowers users to specify their destination, desired travel dates, and preferences, ensuring tailored results. Upon selecting a listing, users can initiate reservations with a simple click, which seamlessly redirects them to the secure Stripe payment gateway. Upon successful payment completion, the chosen listing is promptly reserved, providing a hassle-free booking experience.

Uber Clone (Frontend) — *Nextjs, React-leaflet*

Developed a cutting-edge navigation application enabling users to effortlessly navigate from their current location to their desired destination. Leveraging GPS technology, the application accurately pinpoints the user's current location and dynamically computes the shortest routes available.
